

Translating Telecom Chaos  
into Streamlined Efficiency

# A Baseline Assessment Puts You on the Road to Telecom Visibility and Better Control

## *Get full visibility into your telecom inventory and contracts*

Telapprise's Baseline Assessment provides full visibility to what services are being utilized from an inventory and contractual perspective. This information is critical to making strategic decisions and meeting business goals and requirements supported by these services.

You wouldn't build a house without a blueprint or a foundation, so why would you build a network or migrate carriers without knowing exactly what you have? Telapprise's Baseline Assessment establishes the foundation for making educated financial and technical decisions that reduce costs and improve lead times for implementation of new services.

# Make Educated and Informed IT Decisions With the Telapprise 4-Phase Approach

*"Telapprise helps me rest easy as a department manager. They provide a system of checks and balances with my employees by managing telecom expenses and helping to move projects forward. They provide valuable insight into market directions as well as the negotiation of contracts. There is so little downside risk that it simply doesn't make sense for anyone who manages a telecom budget not to give them a try."*

## Telepprise Client

Director, IT Department Manager

### Data Collection

We identify every circuit, service, and associated contract to get a full picture of your inventory and current contracts.

### Analysis & Verification

We conduct a full audit to identify billing errors, obsolete services, incorrect taxes or fees, and contractual variations or invalid circuits.

### Optimization

We request competitive quotes, renegotiate contracts to optimize rates, and eliminate excess services and contracts.

### Implementation

Once changes to service are approved, we confirm and verify changes with carriers and you become more profitable, competitive and efficient.
